## **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/2/2006 has been entered.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Abe (US 6,521,920).

Abe teaches a method of for forming a sold-state imaging device comprising the steps of : forming a photosensor area "26,27"" in the surface of a substrate; and forming a channel stop section "32 and 44" on the side of the photosensor area "26,27" in the substrate by multiple times of ion implantation with multiple energies.

With respect to claims 1, 2 Abe teaches using multiple energies in multiple areas to form channel stop "32, 44", because in implantation technique (col.8, lines 1-7)

Art Unit: 2812

With respect to claims 4, 5 in the invention of Abe, multiple times of ion implantation are mad of either equal or multiple ion concentration, because Abe specifically teaches the second channel stop can be formed with the concentration in a range of 10 <sup>11</sup>/cm <sup>2</sup> to 10 <sup>13</sup>/cm <sup>2</sup> (col.8, lines 16-20).

Page 3

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Abe in combination with Alvis et al. (US 6,455,385).

Abe does not teach multiple implantations in same area.

Alvis et al teaches multiple implantations with low dose sub steps in the same same area by using same energy in each implantation with small doses. Alvis et al teaches by using multiple implantations with small doses to form any implanted region for making semiconductor device by eliminating dose loss, thereby obtaining the device or IC with intended results(se abstract and summary, fig. 6a, 6 c). It would have obvious to one of ordinary skill in the art to form channel stop region in the invention of Abe by using multiple implantations with multiple energies with several doses in the same area

Art Unit: 2812

because such process eliminate dose loss, thereby obtaining the device or IC with intended characteristics.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Savitri Mulpuri whose telephone number is 703.305.5184. The examiner can normally be reached on Mon-Fri from 8 a.m. to 4.30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Lebentritt, can be reached on 571-272-1873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
